About me

Game designer and programmer focused on gameplay AI, combat and the 3Cs, with shipped titles at Dimfrost Studio and Coffee Stain North. Studying gameplay programming at Futuregames and looking for an internship from spring 2027.

Approachable, detail-oriented, passionate and empathetic. I enjoy working within a project's creative framework and innovating inside it, finding solutions through shifts in perspective, cross-team collaboration and playtesting.

I build quick, rough prototypes to test gameplay and new systems, and I also enjoy planning and developing systems and features that are extendable and open to later changes.

Education

2025.09 - present — **Futuregames, Stockholm**
- *Higher Vocational Degree in Programming*

2018.09 - 2020.08 — **Futuregames, Stockholm**
- *Higher Vocational Degree in Game Design*

2009.09 - 2011.06 — **SAE, Stockholm**
- *Bachelor in Audio Production*

Work history

2025.01 - 2025.02 — **Teacher** - ***Futuregames, Stockholm***
- Taught the design class a course on multiplayer implementation with Unreal Engine 5's networking tools
- Lectured on common pitfalls, best practices and prototyping

2024.01 - 2024.07 — **Game Designer** - ***Coffee Stain North, Stockholm***
Goat Simulator 3: Multiverse of Nonsense - *shipped, Unreal Engine 4, Blueprints*
- Finished the vehicle implementation for both player control and NPC drivers
- Implemented networked gameplay, and iterated on designs and fixed bugs to a shippable state

2022.02 - 2024.01 — **Lead Game Designer** - ***Dimfrost Studio, Norrköping***
Bramble: The Mountain King - *shipped, Unreal Engine 4, Blueprints*
- Designed, programmed and implemented The Butcher boss fight and its AI, from prototype to shipped
- Extended existing AI characters with new behaviours and features to support new gameplay, in line with the design goals
- Prototyped and built gameplay features, mechanics and events throughout the game, from first version to release
- Developed design goals from the project vision and playtesting feedback, and used them to rework existing gameplay and shape new gameplay
- Promoted cross-team communication and ran regular playtesting sessions

2020.08 - 2021.10 — **Lead Technical Designer** - ***Alteruna, Stockholm***
VR CPR Training Team Simulator - *Unity, C#*
- Led the design team through several projects
- Built shared behaviours for NPC helpers that react to the player and to each other
- Iterated on hand-tracking input: a tool for recording and recognising gestures, and physics-based hands
- Linked a real training dummy to the virtual one, giving hand-tracking interactions tactile feedback
- Researched and tested emerging technologies and workflows

Student Projects

Venator - Lead Programmer
Futuregames (4 weeks) - Unity, C#, FMOD
- Built a two-tiered, designer-configurable enemy state machine used on every enemy and the boss
- Built the elemental system around one interface shared by the player, enemies and interactable objects, including damage and health
- Implemented all animations, with root motion kept in sync with NavMesh movement, and all audio in FMOD
